

Experience the luxury
that is Catalina.

 **Catalina Spas™**

Let a Catalina Spa Counter Your Daily Stresses

When life gets complicated, **lean on the calming, meditative features of a luxury spa** to revitalize and heal the body.

While progress is good — too much, too fast can lead to stress and wearied bodies in the workplace.

At our founding in 1977, Catalina's leaders recognized that traditional hot tubs needed radical improvements. Since then, we've significantly raised industry standards by improving the performance, construction and energy efficiency of our hot tubs while incorporating lighting and entertainment packages. We've also included carefully placed jets designed to give you incredible massages to relieve your stress and improve your body's natural healing processes.

Today, people the world over trust the quality of Catalina Spas.

Proud to say: we're American-made!

Today, Catalina is the third largest manufacturer of spas in the nation. All our products are "Made in the USA" by one of the world's largest producers of leisure products. Based in the American South, the parent company produces Catalina's plumbing parts and

cabinetry using company-developed automated processes. Vigilant quality control and stringent post-production testing over many decades have resulted in superior products, recognized worldwide for their beauty, durability, and performance

Technically speaking, Catalina's innovations have raised industry standards.

We use computer-driven systems to keep your water crystal clear and at the perfect temperature. You select the desired mode of service, and your unit automatically maintains this setting, while conserving as much energy as possible. Our Wi-Fi Spa Control System even makes it possible for you to manage your spa via your computer and/or smartphone—which means your inviting spa can be waiting for you,

set to your preferred temperature, upon your arrival at home. What could be better?

Cultivating the delicate balance between a healthier you and a healthier planet, Catalina Spas incorporate the most sophisticated purification systems for crystal clear water with fewer chemicals and minimal effort.

*The Perks of Programmability
Manage your spa via your
computer and/or smartphone*

Scientists have finally confirmed: Taking spa time relieves stress by balancing the nervous system.

How Regular Spa Use is Good for You

Relieves stress: Scientists now know that being in a portable spa can put the autonomic nervous system in a state of balance which helps subjects enter a calmer, more relaxed state.

Relieves muscle pain and tightness: Pressurized water from jets act as pinpoint massagers, helping to loosen tight muscles.

Detoxifies the body: The warm water temperature of a spa — as high as 104 degrees Fahrenheit — causes sweating, which flushes toxins from the body.

Increases blood flow: Warm water immersions cause blood vessels to dilate, increasing blood flow which can facilitate healing.

Improves joint movements: Water makes the body buoyant, allowing free movement of joints without weight or pressure.

Your nervous system falls into balance when your body is immersed in warm water for an extended period of time.

Hydrotherapy, the use of warm, soothing water to ease human aches and pains, has been around for many hundreds of years. We know this due to writings left by ancient civilizations — such as the Greeks (Hippocrates often had patients bathe in spring water), Romans, Japanese, Chinese, and Egyptians.

Until recently, we've had few studies to indicate how effective spas are at inducing calm and reducing stress. However, research carried out over the last decade at the National Aquatics & Sports Medicine Institute at Washington State University has confirmed what the ancient civilizations already knew — that soaking in warm water (at a temperature of 102 degrees Fahrenheit) promotes a "balanced state," not unlike that acquired through meditation, yoga, or other calm-inducing methods.

What we now know due to research at Washington State University

A person's autonomic nervous system helps him or her adapt to changes in the environment, affecting such vital functions as heart rate, digestion, respiration, salivation, and circulation. Although constantly changing, our nervous system's two subsystems — the sympathetic nervous system (which escalates under stress) and the parasympathetic nervous system (which promotes calm) — fall into balance when individuals are immersed in warm water for a period of time. All 32 subjects participating in the test — which included college-age students and others up to age 64 — experienced reduced levels of stress due to the hot tub experiences.

SOURCE: "Research shows warm water immersion beneficial to health" by Michael Popke, published in Aqua Magazine, March 2010.

Catalina delivers superior energy efficiency and much more.

Years of experimenting and research lead to our PATENTED HeatFlow® Technology, which harnesses the energy generated naturally as your water circulates and recycles it back into use. When circulating at high speed, the water temperature automatically increases up to 3 degrees every hour without utilizing the heater or consuming any electricity to heat the water. Wasted energy converted into energy savings with HeatFlow® Technology is unmatched in the industry and unavailable from any other manufacturer.

"Free Heat" generated inside every Catalina Spa can reduce your energy costs by as much as 12% annually.

Catalina Luxury Collection

Kennedy 3 Person Spa

3 SEATS 42 JETS 2 PUMPS

- 70" x 84" x 38"
 - (1) 7HP and (1) 4HP
 - 42 Custom Crystal LED Lit Jets
 - Touchscreen Controls

Cutting Edge Water Care

Balboa Wavetec UV Sanitation System

Balboa Wavetec UV Sanitation System consumes very little energy and requires very little maintenance. This environmentally friendly system impedes the growth and spread of harmful viruses that are resistant to chlorine and other chemicals, and eliminates skin and eye irritations that are the usual result of chemical use.

Clear View Ozone Sanitation System

The smell of freshness in the thick air after a storm is ozone, nature's most powerful cleaner, created when oxygen and electricity collide. Like lightning in a bottle, we've recreated that dynamic reaction in our Clear View Ozone Sanitation System. Reducing the need for chemicals with natural oxidizers powerful enough to kill bacteria and break down body fluids, environmentally friendly Clear View Ozone Sanitation Systems convert excess ozone into oxygen leaving nothing behind except the fresh scent of a summer storm.

The Catalina Catalyst

Independently Ozone and UV Sanitation boast impressive benefits. With the Catalina Catalyst, both systems become even more effective.

Whenever your water circulates, the Catalina Catalyst creates supercharged hydroxyl radicals powerful enough to oxidize chemical resistant bacteria and contaminants, making them easier to remove. With a circulation pump on every Luxury Collection Spa, circulating water continuously, Catalina Catalyst is always working.

There's no way to eliminate chemicals entirely, but Catalina Catalyst purifies your water with fewer chemicals than any other system in the marketplace today.

Luxury Collection Exclusives

Auto Fill Water System

Topping off your spa is a critical step in routine maintenance, but finding time in your schedule can be tough. Our automatic filling system continuously maintains the water level, preventing temperature fluctuations and unnecessary heating cycles when cold water is added during winter months.

Backlit LED Comfort Cushion Headrests

The peg free design and continuous seal chemical resistant vinyl coating makes waterlogged pillows a thing of the past. Backlighting adds an unexpected pop of color to the expandable foam cores that provide comfort and support your head and neck, making them more than just a decoration.

Settle in and unwind with our patent pending fire features.

Colorful Touchscreen Controls & Wi-Fi Connectivity

Buttons, programming sequences and flowcharts have been replaced with a colorful, intuitive, touchscreen display. Set up, water care and energy savings settings couldn't be simpler with pre-programmed settings for a variety of scenarios. With Wi-Fi connectivity, your spa controls are always at your fingertips, letting you monitor and program your spa from your smartphone whether you're on the other side of the room or the other side of the globe.

Self-Extinguishing Fire Feature

Your spa feels like a different place when the sun goes down and the warm glow from our patent pending fire feature encourages you to settle in and unwind. Subtle yet dramatic, they're impossible to ignore.

Fresh Water Mist System

Wrap your spa in a gentle, refreshing mist that cools your skin on contact. Because it uses fresh water, there's no chemical smell or noxious vapors.

Spinning Crystal Ball Fountains

Mesmerizing. Colorful lights illuminating crystal balls that spin as they levitate on a veil of water. Lost in thought, their effect is almost hypnotic, calming your mind and inviting you to linger in your spa a little longer.

Eternitree® Forever Frame

Engineered for marine and shoreline applications, Eternitree® Forever Frame can withstand exposure to extreme moisture for prolonged periods. While other manufacturers use surface grade treated lumber, and only on the base of their spas, our Luxury Collection Spas are constructed entirely from Eternitree® — from the bottom to the top. An inventive approach to design and sustainability, we guarantee your frame to be free from erosion, rot, decay, and termites for as long as you own it.

Molded ABS Bottom

The custom molded form fitted solid ABS bottom wraps the entire base of your spa, forming a seal around the foundation and all 4 sides of the cabinet — sealing the components, equipment, and heat safely inside while keeping moisture and pests on the outside.

SynthaWood™ Skirting

From its clean lines and classic styling to its rich tones in modern, updated colors, SynthaWood™ Cabinetry has the sophisticated look of fine furniture that adds an opulent touch to your outdoor space. Extreme UV protection and water resistance make it impervious to the damaging effects of harsh sunlight, torrential rain, and heavy snow; it never needs painting, staining or sealing. SynthaWood™ cabinetry is as resilient and durable as it is beautiful, never losing its luster as it protects your investment year after year.

Included with Every Luxury Collection Spa

- Touchscreen topside controls with remote diagnostic capability and remote function app
- Custom Crystal Backlit LED Jets
- LED Cabinet Access Lights
- Underwater LED Lighting
- Glass Tile Inlay
- AM/FM/Bluetooth audio with subwoofer and two speakers
- Patent Pending Magnetic Total Seal Pillows
- ABS Pan Bottom
- Clear View Ozone Sanitation System
- Full Foam Insulation
- Deluxe Locking Insulating Cover

Every Catalina Spa comes with underwater LED lighting.
