

STRONG SPAS

2 Premium

10 Elite

18 Durasport®

Welcome to Strong® Spas... and experience soothing relaxation and revitalization for years to come.

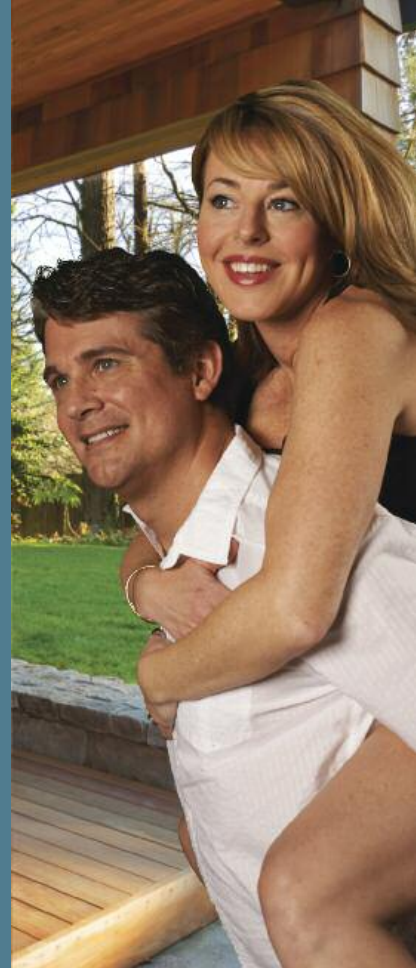

Each Strong Spas hot tub has been engineered to provide you with relaxation through hydrotherapy, with an emphasis on performance reliability, durability, and ingenuity. This is what differentiates Strong Spas' hot tubs from all others.

Relax. Engage. Entertain. Heal. Step into your Strong Spa to relax, de-stress and let our hydrotherapeutic systems heal your sore muscles and soul. Entertain and engage with family and friends in the privacy of your own backyard. Enjoy a romantic evening under the stars, or the tranquility of alone time. Strong Spas are engineered to last a lifetime and to ensure consistent delivery of performance and durability. To achieve this, Strong Spas prides itself on our innovative design ingenuity. We hold some of the most advanced patented and patent-pending designs in the industry.

Our Strong Spas Dura-Last™ and UltraTec cabinets, Titan™ HardCover, Energy-Lok™ and Forge-Cast™ technology are just a few of the many unique features that make Strong Spas energy-efficient, economical to operate, and a worthwhile investment. Our company is committed to bringing you the most durable, reliable hot tubs on the market at any price point, and to provide you with the hot tub experience you deserve and expect.

Thank you for taking the time to research our products. I hope you find Strong Spas as exciting and invigorating as we do.

Sincerely,
Wade Spicer
CEO/Founder, Strong Spas

STRONG'S TITAN™ HARDCOVER

Nothing captures the spirit of Strong Spas more than our Titan HardCover system.

We set out years ago to not only reinvent how hot tubs are made, but to also redefine how they are covered. We believed that there needed to be a cover that would be able to last as long as our DURA-LAST™ spa cabinet... a cover that wouldn't absorb moisture, or deteriorate... a cover that not only would exceed the old standards of heat retention, but, one that would actually protect the hot tub while enhancing its ease of use and cosmetic appearance. The results of our ambitious quest... The Titan HardCover!

The Titan HardCover is molded from durable, color-coordinating resin, which is able to withstand the harshest of environments while providing the highest degree of safety, along with a unique energy-saving insulation method. The Titan HardCover is molded hollow, then filled with a proprietary formulation of insulating foam. This foam is encapsulated within the resin cover, thus protecting it from moisture and the harsh chemical vapor barrier that forms between the water's surface and the underside of covers.

With the Titan HardCover we not only re-sculpted how a spa cover appears, but, we also redefined how it opens. All of our Titan HardCover systems open smoothly in two parts by simply pulling the lever arm toward you. Then, the cover is reclosed with the same simplicity. Once closed, the Titan HardCover acts similar to a tortoise's shell and is virtually impregnable to whatever humans, or nature, throws its way.

EXCLUSIVE FOLDAWAY STEPS & TOWEL HOLDER

Safe and convenient, these spa steps fold away where they remain clean, dry and out of the way!

Towels tuck inside the unique towel door so they are dry and easy to reach! See page 28 for feature availability.

The Cabinet that Built Strong®

QUALITY. MAINTENANCE-FREE. ENERGY-EFFICIENT. LIFETIME BEAUTY.

PATENTED DURA-LAST™ CABINET FOR STONG'S PREMIUM SPAS

- The 1st Spa Cabinet with a LIFETIME WARRANTY!
- MAINTENANCE-FREE DURA-LAST™ Cabinet
- Cabinet will NEVER deteriorate, rust, rot, crack or peel
- Made of UV-protected resin
- Lifetime Beauty

Toughest spa on the market! DURA-LAST cabinets won't deteriorate, shatter or crack even when hit with a baseball bat!

ECO-FRIENDLY SPA MANUFACTURING

- Fewer chemicals needed with ozone filtration
- Acrylic shell backed with StrongBond® rigidizing material. No eco-pollutant fiberglass.
- Cabinet is built from partially-recycled materials

STRONG'S ENERGY-EFFICIENT SPAS

- Insulated Double-Walled Construction
- Pump Heat Reused/Recycled within cabinet air space
- Cost-Efficient Heating from TRIBRID Synergy Heating System
- Insulated Base 10x thicker than 1/4" standard bases
- Passed the rigorous California Energy Commission (CEC) Efficiency Test

As one of the largest spa manufacturers in the world, Strong is known for its innovative design and engineering of spas built to last a lifetime. We are known for delivering the most durable and reliable spas on the market that are easy to operate and withstand the harshest climates. To achieve this, we are committed to quality control and a state-of-the-art manufacturing process.

QUALITY ASSURANCE

Every Strong Spa® is required to pass a rigorous quality-control inspection, which includes more than 100 quality-assurance checkpoints and a minimum 4-hour water test, during which all of the systems are tested for quality and performance.

PRODUCTION AND MANUFACTURING

The way we build our hot tubs is what makes Strong unique. Strong Spas are made in the USA at our Pennsylvania facility, using American-made components.

The cabinet process begins with a hollow, two-part mold, which is filled with granular polyethylene polymer. The mold is mounted to a sophisticated machine, which externally heats while biaxially rotating the mold. The heat softens the powder into liquid form. As the mold rotates, the melted material coats the inside of the mold.

Intelligent software distributes the material evenly to ensure consistency of product. Once cooled, the two-part mold is opened, revealing the finished resin component.

ALL-WEATHER CONSTRUCTION

Strong Spas are uniquely insulated to save energy and maintain water temperature so they can be enjoyed year-round. Our patented, virtually indestructible DURA-LAST resin cabinet is designed to withstand the harshest of climates and is backed by a Lifetime Warranty!

JET PHILOSOPHY

Many spas are sold based on the high number of jets advertised. At Strong, we like to focus not only on jet quantity, but also jet quality. We feel that well-placed technical jets that offer a variety of massaging actions improve hydrotherapeutic pressure and performance and truly make the spa experience enjoyable.

INDUSTRY RECOGNITION

Strong Spas sets the standard in design, durability and manufacturing methods for hot tubs and is an industry-recognized leader for our accomplishments. Strong Spas is proud to be recognized in the industry as a SPA CERTIFIED manufacturer, awarded "Best in Class" year after year, and recognized as one of the "Top 10 Pool & Spa" companies for superior products, innovation and customer service by PoolandSpa.com.

STRONG PREMIUM SERIES

NEW FOR 2014!
 Optional Titan™ HardCover
 for Elite Series Spas!

Strong® Spas' Elite Series Spas with UltraTec Cabinet

It's in our nature to provide you with personal options and an experience that you will want to come back to again and again.

The Elite hot tub series has been designed with all the necessary luxury features you would expect from a Strong Spa, but also indulges your spirit with enough choices to allow you to make it your own.

Heighten your level of comfort with such options as our increased performance jet packages, air blower system, and even a hybrid UV/ozone combination sanitation system.

If your preference is to combine your hydrotherapy experience with music, the Elite Series offers several choices of Marine-grade stereo systems which stand up to water, sun and the harshest environments and have the high-power sound performance to provide clean, clear sound within the outdoor water environment.

QUALITY ASSURANCE & OUR MAINTENANCE-FREE DIFFERENCE

Every Strong Spa is required to pass through more than 100 quality-assurance checkpoints, which is a rigorous quality control inspection and includes a minimum 4-hour water test.

The UltraTec™ cabinet exterior is made of a UV-protected molded resin, which is extremely durable and impact resistant, keeping your spa's contemporary wood-look beautiful for years to come and requires no maintenance.

ENERGY-EFFICIENCY & INTERNAL ACCESSIBILITY

Every Strong™ Acrylic Elite spa features our exclusive TRIBRID™ Synergy Heating System. The stainless steel, true all-season heater enhanced with our ThermoCELL friction heat source... 2 heat sources running at the cost of one. Plus, heat generated by the pumps in the internal cabinet air space is recycled and utilized by your Strong Elite Spa, which saves energy, and, therefore, saves you money.

Our ULTRA-TEC™ cabinet is insulated using polyurethane custom-molded foam. The foam is fitted tightly to the spa's frame which provides for heat retention, yet is easily removed for access to internal components.

MANUFACTURING & ENVIRONMENTAL RESPONSIBILITY

Our Strong Elite spas are manufactured in the USA using American-made components, including partially recycled materials. The spa shell is constructed using our exclusive StrongBond® rigidizing system on our ABS-backed acrylic shell instead of fiberglass. StrongBond eliminates Styrene, a hazardous air pollutant, keeping the manufacturing process environmentally-responsible. The finished product is an extremely durable, impact resistant beautiful spa.

Antigua

G-2

G-6

The Process of Rotational Molding

Rotational molding, also known as "roto-mold", is a highly advanced manufacturing technique used to create our spas. The process begins with a hollow, two-part mold, which is filled with granular polyethylene polymer (advanced high-impact resistant powder plastic). The mold is then mounted to a sophisticated machine, which externally heats while biaxially rotating the mold. The heat softens the powder into liquid form. As the mold rotates, the melted material coats the inside of the mold.

Intelligent software distributes the material evenly to ensure consistency of product. Once cooled, the two-part mold is opened, revealing a single-piece constructed spa. The benefit of this manufacturing process is that our rotationally-molded series will never rot, rust or deteriorate. Also, they have the ability to withstand impact... an indestructible cabinet and shell... looking beautiful for years to come. We back this claim with the industry's first LIFETIME WARRANTY!

Hybrid Synergy Heating System™

An exclusive feature standard on all Strong's Durasport rotationally-molded spas, the Hybrid Synergy Heating System utilizes our patent-pending ThermoCELL technology along with our ultra-efficient inline heater.

How does the ThermoCELL work?

ThermoCELL technology incorporates the basic laws of thermodynamics. The ThermoCELL is designed with 10 internal "teeth-like" projections mounted on the pressure side of the pump. When the pump is on high speed this rapid movement of water through the ThermoCELL generates considerable kinetic energy (friction). This frictional energy transfer results in the water gaining heat without the use of any additional fuel source. An example of kinetic energy is rapidly rubbing your hands together on a cold day. Friction results in your hands generating heat. ThermoCELL uses the same principals, only more efficiently and at a much higher rate of speed.

Benefits of the Hybrid Synergy Heating System

- Less electrical consumption.
- Reduces operating costs.
- Increases lifespan of heater due to less usage.
- Only 120V/240V spa that can heat on both high & low speeds.
- Environmentally-friendly technology.
